OBJECTIVE: Software Engineering candidate with full-stack internship experience. Solid foundation in object-oriented design and agile collaboration skills. Seeking full-time opportunities in 2026 to deliver high-quality, end-to-end technical solutions.

SKILLS

LANGUAGES

C# — 5-6 years of experience, mostly through the Unity Engine. Brief work in .NET and WPF.

Object-oriented: Java, C++, C, Ruby on Rails — 1-2 years of experience through professional and academic work

SQL — 1-2 years of database handling, including back-end work to connect it together

Other languages: Python, HTML/CSS/JavaScript, Dart, Typescript

SOFTWARE

Flutter, React — Handful of projects created with both front-end frameworks

For workflow: Git/Github, DevOps, Amazon Web Services (AWS), Microsoft Office, Jira/Asana

OTHER

Typing average of 100+ WPM, German A2 level of understanding

EXPERIENCE

Discovery Machine, Inc. (Williamsport, PA) - Software Engineer Intern

JANUARY 2025 – AUGUST 2025

- Developed AI-driven document generation services using Java and Flutter alongside multi-modal language models to produce text-based results.
- Collaborated with subject-matter experts alongside a team of senior engineers to translate multi-step processes into well-designed and functional software.
- Designed and implemented authentication/authorization RESTful services including user management, session handling, and role-based access controls.
- Built business logic components using Flutter and Dart, integrating with cross-platform UI components to create a modular and visually-responsive application.
- Constructed a locally-hosted LLM prompting service, and performed R&D for performance of various models along with dedicated prompt engineering.

L Street Corporation (Chicago, IL) - Software Developer

MAY 2022 – JULY 2024

- Originally brought on as an intern, but promoted to main software developer due to technical proficiency.
- Becoming familiar with Ruby on Rails to solo-maintain an application of one of the company's subsidiaries.
- Used software such as GitHub and its branches to push independent changes live to the application.
- Used AWS for company storage of various documentation and creation/maintenance of application APIs.

C Speed (Liverpool, NY) - Software Co-op

AUGUST 2023 – DECEMBER 2023

- Maintained and rebuilt a legacy C# application responsible for calibrating various embedded devices. Ensured that the application would work for future products successfully.
- Tested with the company testing team to ensure that new plugins were working and up to standards.
- Worked on a small development team for a new embedded product, working in C++. Used software such as Azure DevOps and Git to follow the software development process and push various updates.

Independent Projects

2017 – PRESENT

- Handful of individual video-game-creation projects
 - 7+ years of experience with the Unity engine, as well as experience with other related packages.
 - Participation in multiple game jams (time-constrained project completion) in collaboration with others.
 - Later sets of projects/demos can be found at <https://yackseb.itch.io/> with repositories located at <https://github.com/jacksebben>.

- Developed a game-hosting website for my peers that lasted over a year; 100+ concurrent users.

EDUCATION

Rochester Institute of Technology, Rochester, NY - *Bachelor of Science in Computer Science*

AUGUST 2021 – DECEMBER 2025

- 3.8 GPA, Dean's List for all semesters
- \$10,000 in merit-based scholarships
- Participated in Computer Science study abroad during the summer of 2024 in Osnabrück, Germany.
- Game Design & Development Minor; German Immersion
- Relevant courses: Computer Science Theory, Concepts of Parallel and Distributed Systems, Software Engineering, Principles of Data Management, Analysis of Algorithms, Game Design & Development, Web & Mobile Design
